CLOUD TRANSFORMATION SERVICES

Defining, Guiding, Designing, and Implementing ITaaS, ESM, DevOps, and Cloud Solutions.

Our focus is to enable businesses to define and prioritize key business requirements that will drive true positive transformation throughout the enterprise leveraging a combination of industry best practices with insight into tomorrow's leading edge tools and technologies. Our experts help define and guide your journey to success through a proven adaptive methodology for envisioning, design, implementation and ongoing optimization.

Customized Cloud Transformation Solutions

ITAAS

Why can't we offer more services both in house and out? How can we make our IT offering the logical choice to meet our needs? Who needs access to what services and when? If you're having trouble answering any of these questions or your company is experiencing challenges with ITaaS, our team of consulting experts can help you redefine your strategy and revamp your architecture as it relates to your policies around IT governance and services management while addressing key issues such as services integration and quality.

ESM

What bottlenecks are impacting our services today? How fast are our processes from end to end? How fast are our sites and services for our users from the front end? Take your Enterprise monitoring strategy and capabilities to the next level and into the new age of infrastructure and application monitoring intelligence. Our team of experts has deep expertise in various monitoring technologies including application level and user experience monitoring. Our teams can help you gain insights from your structure and services that you never knew were possible.

DEV-OPS

What is our software development lifecycle and how long does it take? What tools and processes do we need to enable our developers to avoid monotonous system configuration and get to coding faster? Should we be focusing on physical implementations, virtual implementations, containers, or all of the above? Our experts in established SDLC automation tools, next generation container technology platforms, as well as open source and proprietary tools can help you navigate through the ever-changing technology landscape and DevOps concepts to ensure that you arrive at the best solution for your business.

CLOUD

What cloud services should we be using? What is shadow IT and how do we fix it? What is the right way to implement cloud services to avoid common problems? Our experts are battle hardened cloud veterans who can take you through the process of planning, building, or re-assessing a cloud solution that will be optimized for your specific needs. Whether you are just starting on your journey to the cloud or you are ready to go to the next level to your cloud services our cloud resources can get you not just where you want to go but help you determine where you need to go to stay ahead of the game.
